

Introduction to Game Theory and Economics

By Shomit Sirohi

From lines – infinite power – to simple game theory – to explaining it and going towards a Greek family of Varoufakis to understand their view of lignes de fluit as a materialist game theory of what they would call

Sirohi perhaps – talking to Poulantzas and Althusser at a Universidad and drinking beer and eating hot dogs. It is what is called a Lignes de Fluit according to Poulantzas as Althusser is getting a bit metaphysical about the process.

I. Von Nuemann on Economic Theory of Games

This old work studying chess, games and winning games which is like economic behaviour tries to argue quite simply – games are important to economics. In a speculative rendition of this it means – he has in one level of abstraction made complex changed economics to dynamic economics and even in fact made it the

formalism of a ladder –
game theoretic which
means in fact as Yanis
Varoufakis argues –
‘games are not simple
games, unless they are
dynamic moves – which
also means to simplify
three things – game
behaviour, consumer
behaviour, collective as
over individual
behaviour this means
the mix of dynamics and
public companies which
then is like a game

played in dynamic ways
in the sense of
institutions.”

II. Enumerate the ideology of Game theory in Economic Behaviour

In a list of features then
games are made to
work on the theory of
games, then comes sets
of features of dynamics
like cinema or even

universities and
dynamic spending and
expenditure rates which
then becomes the
feature of profitable
companies which are
also creative in the mix
and finally the metaphor
public state efficiency
for even Cuba secured
in a game theory – just
imagine as if it were the
perfect theory of
dynamics, creativity and
state being the slow

player which is also played into it.

III. Impure and Pure Exchange from Varoufakis

Once one has public sector companies and their simple budget plan in for also private sector plans and architecture from EU and World Bank, IMF made to transact financially –

what then is lacking in society say in Spain or in Greece, - just the pure exchange of finance developing its pure process of the features of profit, and even profitable notions, and even pure financial lines and transactions which keep it profitable and wealthy and creative - the game is now dynamic game moments of creative ideas, lignes of flight in

fact – now comes the
process of pure
exchange this way –
keep listing it.

Now comes its impure
exchange process – the
phone calling, the coffee
for cheap money – the
political parties of
Greek communists and
Indian philosophers
with Zizek helping them
out on the idea of
academics – culture
then, or cultural

criticism which has
impure exchange in it as
the cultural plan –
which is integrated to
the economic plan – for
then universidades y
bibliotecas.

Parte II From Public
Sector, Private Sector,
Financial Exchange
pure to impure
exchange – how to also
add a few game theory
moves to it –

Let's call game theory therefore a process of making economics dynamic and creative – is this then Von Neumann's point? “I think game theory is difficult to understand and means how companies, firms, and public companies and deals with EU and then America actually works out to meaning lesser spending or

Keynesianism and instead we make it really dynamic and fast in Greece to create a process I call economics, of in fact then 'lines or lignes de fluit,' in fact I mean it should be like a lignes de fluit the process.'

Varoufakis argues while eating a burger at Mcdonalds in his car near where I live.

I mean in fact it is like
Greek metaphysics then
the book – I steal from
him and his wife the
idea of his daughter –
Just keep being
metaphysical and it
works.

Parte IV

Greek metaphysics and
features of games in
Greek fables and stories
– when it is therefore
basketball and a court

which then means
dynamics and simplicity
of Mozart – this maps
onto Greek metaphysics
– a novel I wrote – one
creative lignes de fluit is
in fact clothing fashion
stores and hotels and so
many artistic things to
do – like even arcades
or government shops
and banks and all that
for the middle class and
then protests all that as
well – list it – and then
complexly integrate it –

to games – its simple –
Greek metaphysics
means just be
metaphysical – like one
lignes is in fact about
walks and crowds
hanging out in a cinema
hall this becomes with
the lignes de fluit – the
process of companies
creating a line to it
which is called
economics in Sirohi –
lines are also games
first and then lignes de

fluit – this way in fact –
rhizomatic.
